

Memorandum

July 6, 2011
Revised: 1-16-19

To: All Swimming Pool Contractors

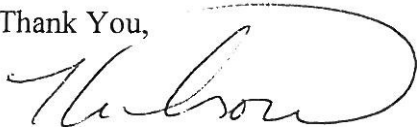

Re: Final Inspection Procedure Modification

Prior to this memorandum, homeowners or their representative(s) have been required to be present for the swimming pool final inspection. During the final inspection, we verify that all doors and windows with direct access to the pool areas are protected by an auditable alarm or other approved means.

In an effort to reduce property owner burden of having to be present for the final inspection, the Property Owner's Barrier Statement may be completed and signed by the property owner, **not** by the pool contractor and uploaded to the project **prior** to scheduling the pool final (barrier statement will not be accepted if submitted when applying for the permit.)

This form is not required to be submitted if the homeowner or owner's representative chooses to be present for the inspection.

Thank You,

Swimming Pool Barrier Statement Property Owner

Property Address: _____

Property Owner (print name): _____

As the property owner of the above address, I understand that when the wall of a home serves as part of the required barrier around a swimming pool that all doors with direct access to the pool must be protected as prescribed by the International Swimming Pool and Spa Code (ISPSC), unless the pool is equipped with a powered safety cover that complies with Section 305.4 of the 2021 ISPSC.

This statement is certifying that the following method has been used to satisfy the ISPSC barrier requirements.

Please check **one** the following methods that applies:

☐ An audible alarm, listed and labeled in accordance with UL 2017 has been installed on all required doors and windows. The deactivation switch(es) are located at least 54 inches above the threshold of the door and are in compliance with Section 305.4 of the 2021 ISPSC.

OR

☐ An audible alarm, listed and labeled in accordance with UL 2017 has been installed on all required doors. In addition, all operable windows with sill heights less than 48" have an opening control device installed that complies with ASTM 2090, which limit windows from being opened more than 4" unless released.

I understand that by providing this document, a homeowner or representative will not need to be present for the final inspection to take place; however, a city inspector will still need access to the pool area.

If pets are in the yard at time of inspection, the inspection will not be performed and will need to be rescheduled.
