SEWER

§ 89-9 Permit required to connect to or disturb public sewer.

No person shall uncover, make any connections to or opening into, use, alter or disturb any public sewer or appurtenance thereof without first obtaining a written permit from the Village Board.

§ 89-10 Structures not serviced by initial construction.

A. With respect to structures not serviced by the initial public sewer construction, there shall be two classes of building sewer permits:

(1) For residential and commercial service.

(2) For service to establishments producing industrial wastes.

B. In either case, the owner or his agent shall make application on a special form furnished by the Village. The permit application shall be supplemented by any plans, specifications or other information considered pertinent in the judgment of the Engineer. A permit tap-in and inspection fee, hereafter imposed within the Village of Canisteo for a single residential sewer permit, shall be paid to the Village Clerk at the time an application is filed and shall be payable within 30 days after receipt of the bill for same from the Village Treasurer. The Village Board shall fix a permit, tap-in and inspection fee for multiple dwellings and each commercial, industrial, or other nonresidential building after recommendations of the Engineer based on the size and nature of the operation proposed in such commercial, industrial, or other nonresidential building as compared to the demands of a single residential structure.

§ 89-11 Separate laterals required; exceptions.

A separate and independent building sewer lateral shall be provided for every building, except, where one building or existing mobile home on a permanent foundation stands at the rear of another on an interior lot and no private sewer is available or can be constructed to the rear building through an adjoining alley, court, yard or driveway, the building sewer from the front building may be extended to the rear building or mobile home and the whole considered as one building sewer. Where building sewers are to serve multiple dwelling structures, there shall be provided at least one separate building sewer lateral for each group of six living units.

§ 89-12 Use of existing laterals.

Existing building sewer laterals may be used only when they are found, on examination and testing by the Superintendent, to meet all requirements of this chapter.

WATER

§ 111-3 Plumbers to be employed.

All persons desiring a water supply from the Village of Canisteo shall employ only capable plumbers to do the work, and, when such work is completed to the satisfaction of the inspection of the Streets Maintenance Supervisor and in compliance with all the rules and regulations and all payments for the water tap have been made, then water shall be turned on in the premises.

§ 111-4 General conditions and restrictions.

A. All of the expense attending the introduction of water from the curb box into any premises must be paid by the applicant.

B. Any user of the Village water supply outside the Village limits shall be responsible for furnishing and maintaining his or her own lines all the way to the Village-owned water mains. The Village Streets Maintenance Supervisor will furnish the tap into the main, water meter, curb box and curb stop. The Village Streets Department Supervisor will inspect all work before the water will be turned on. The applicant of the premises is responsible for all streets, roadways or rights-of-way he or she digs up and will have to satisfy the governing body in charge of said areas.

C. No tapping of the street main shall be done or connection made thereto except by the Streets Department or an authorized plumber approved by the Board of Trustees, nor shall a tap be made without a permit from the Board, stating the size of the tap and pipes and their location. The person doing such work shall report, in writing, to the Board the number and size of all taps inserted by him, the length and size of service laid and the precise location of each tap, curb, cock, box and pipe.

D. There shall be a curb stop cock and box connection with the service pipe running into any premises placed inside the curb line of the street, and a stop cock at the main, and a stop and waste cock placed just inside the building so that the water may be turned off of the whole house by either stop cock without closing the others. The size and kind of taps, service pipes, stop cocks, waste cocks, curb boxes and private hydrants shall be as determined by the Board of Trustees.

§ 111-5 Service from main to curb box to be maintained by Village.

Service from the main, to and including the curb box, shall be maintained, and kept in repair by the Village at the expense of the Village unless injured or damaged through no fault of the Village.

§ 111-6 Inspections; turning on water.

A. All services for the use of water shall be subject to the inspection and approval of the Board of Trustees or the Streets Maintenance Supervisor as to pattern, material, and workmanship.

B. It is understood and agreed that the Streets Maintenance Supervisor or any other authorized employee of this Department may enter the premises of a consumer at any reasonable time to examine the pipes, fixtures and outlets, the quantity of water used and the manner of its use; and, in case of fraudulent representation on the part of the consumer or unnecessary waste of water, the water supply may be shut off by order of the Board of Trustees upon reasonable notice.

C. No persons, except those having a permit from the Board of Trustees or the Streets Maintenance Supervisor, shall turn the water on in any plumbing, whether new or old, except that it may be turned on to test the work, to be turned off immediately after the test is made.

D. A penalty for the violation of this or any part of this rule may be assessed against the property owner in an amount to be annually determined by the Board of Trustees, and the plumber's privileges may be revoked at the discretion of the Board of Trustees.
