Water Tap Installation Information & Fees

For 12" Transmission Main

The Village will install a 1" tap and service line from the water main to the property line.

The property owner is responsible to install the service line from the curb valve, located at the property line, to the house.

The Village will furnish, for your plumber to install, a ¾" inlet ball valve, meter yoke bar and double check valve outlet cartridge.

The water pressure is 70 –100 psi, therefore, the owner is required to install and maintain a pressure reducer.

Your plumber will have to install a thermo expansion tank on the inlet line of the hot water heater.

Your plumber will have to install a #20-3 solid core wire from the meter location to the outside remote reader.

The Village will install the meter after the thermo tank, pressure reducer and remote wire are installed.

There are options for the installation of outside meter pits.

If you have any questions, please contact this office.

Sincerely,

Chad Hoffman
Village Administrator
