**WATER HEATER
EXPANSION TANK
PRESSURE CERTIFICATION FORM**

The City **requires** the installation of an expansion tank on a new or replacement water heater. Due to municipal water service conditions, individual premises should be treated as closed systems. The plumber is responsible for setting the pressure on the expansion tank to match the water pressure in the building. The correct pressure setting must be established and tested per the manufacturer's specifications by the plumber. **The plumber shall submit this form at the time of inspection** certifying that both the pressure of the water and the expansion tank have been tested and confirmed to match.

Address of worksite: _____

Plumber's Name: _____

TSBPE License Number: _____

Water Pressure of Building: _____

Pressure Setting of Expansion Tank: _____
