

**Public Works
Engineering**

A dimensioned schematic site plan must be submitted with this application.

Special Note:

Trenchless technology cannot eliminate sags in the pipeline. Contractor is responsible for the line and grade, and shall inform owner if trenchless piping is not suitable for the site-specific application. The City of Berkeley prohibits trenchless installation on sewers with less than 1% slope.

Private Sewer Lateral Permits must be obtained by a C-36, C-42, or Class A General Engineering Licensed Contractor.

Guidelines:
